

## **ENERTECK LAUNCHES NEW WEBSITE**

*Enhanced Functionality and Online Service the Goal for Customers and Distributors  
As Company Deploys Diesel Fuel Accelerator Worldwide*

**STAFFORD, TX – May 2, 2013** – EnerTeck (OTC: ETCK) today announced the launch of its new website at [www.enerteck.net](http://www.enerteck.net). The site has been enhanced to further streamline EnerTeck’s services to customers and distributors as the company begins deploying its flagship product, EnerBurn®, a diesel fuel catalytic combustion accelerator and its complementary injection technology, with large diesel customers around the world.

After 10 years of research and development, the company has become operational in 2013 with its first major purchase orders. The EnerBurn system is undergoing evaluations with some of the largest marine, mining, military and industrial organizations in the world that are making fuel cost-savings a top priority. With the pressure on as well to reduce particulate emissions, EnerTeck’s newest product, PEx® (Particulate Extraction) is being put to the test and is expected to receive CARB (California Air Resource Board) approval this year.

The company has several new distributors and resellers in place in 2013 including EnerGreen Technologies (based in Australia and with distribution networks in Southern Asia, Europe and South America), Jane Gates Inc. (manufacturers’ representative in oil and energy sales based in the Minneapolis area), Diesel Performance Teck (based in the greater Denver area), and Energy Information Works (an energy management consulting firm based in New York City).

EnerGreen is currently working with Jan de Nul, one of the world’s largest marine and dredging companies, on a major evaluation in Germany.

“Our sales cycle is rapidly accelerating as today’s major diesel operators see the cost-savings results achieved with EnerBurn, and sophisticated chemical and mechanical engineers are more involved with purchasing decisions related to fuel consumption and emissions reduction,” said EnerTeck CEO Dwaine Reese. “Our new website reflects our evolution into an operating company, and our commitment to serving our worldwide customers with a more responsive, interactive online presence.”

### **About EnerTeck**

EnerTeck Corp., through its wholly owned subsidiary, EnerTeck Chemical Corp., specializes in the manufacture, sale and marketing of diesel fuel performance improvement catalysts and emission reduction technologies. The company’s injection equipment and flagship diesel fuel catalytic combustion accelerator product, EnerBurn, have proven dramatic fuel savings, reduced emissions and prolonged engine life for large diesel operations in a variety of industries around the world including marine, ground transportation, mining, oil field services,

fracking, military, government and public transit. In 2012, EnerTeck introduced and is now testing its PEx® (Particulate Extraction) product in anticipation of CARB (California Air Resources Board) approval in 2013. For more information, visit [www.enerteck.net](http://www.enerteck.net).
